System Overview

The License Management System (LMS) is a comprehensive solution designed to manage software licenses, user access, and product activations. The system provides a secure and scalable way to manage software distribution, track license usage, and ensure compliance with licensing agreements.

Key Features

- User authentication and authorization
- · License key generation and management
- Product catalog management
- · Purchase and activation tracking
- User and role management
- · Dashboard and reporting
- License activation simulation

System Architecture

High-Level Architecture

Component Architecture

- 1. Frontend (React.js)
 - User Interface components
 - Dashboard and reporting
 - Admin console
 - User management interface

2. Backend (Node.js/Express)

- RESTful API endpoints
- Authentication service

- License management service
- Product management service
- User management service

3. Database (MongoDB)

- Users collection
- Products collection
- · Licenses collection
- Purchases collection

4. Client Library

- License validation
- Machine binding
- Activation management

Technical Stack

Frontend

• Framework: React.js

• State Management: Redux/Context API

• UI Components: Material-UI

• Routing: React Router

• HTTP Client: Axios

Backend

Runtime: Node.jsFramework: Express.js

Authentication: JWT (JSON Web Tokens)Database: MongoDB with Mongoose ODM

Validation: JoiLogging: Winston

Client Library

• Language: JavaScript/Node.js

• Cryptography: crypto-js

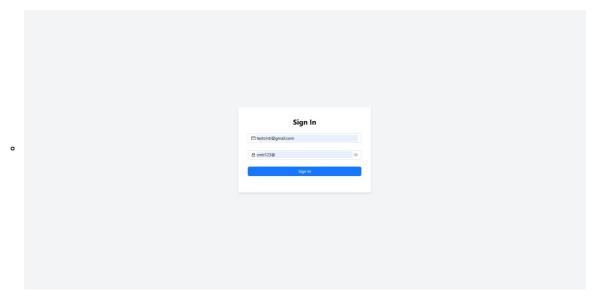

• HTTP Client: Axios

Persistence: File system for local storage

User Workflows

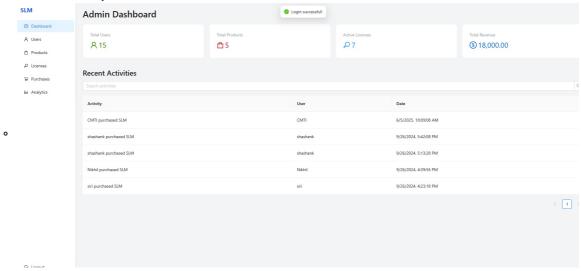

Admin Workflow

- 1. Login
 - Access admin dashboard with elevated privileges

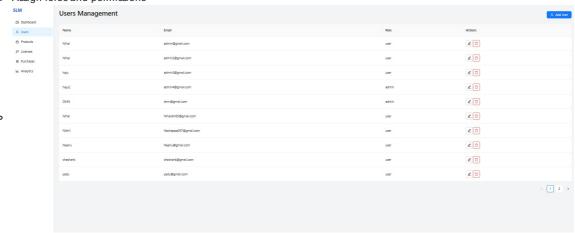

2. Dashboard

- · Overview of system metrics
- Quick access to key functions

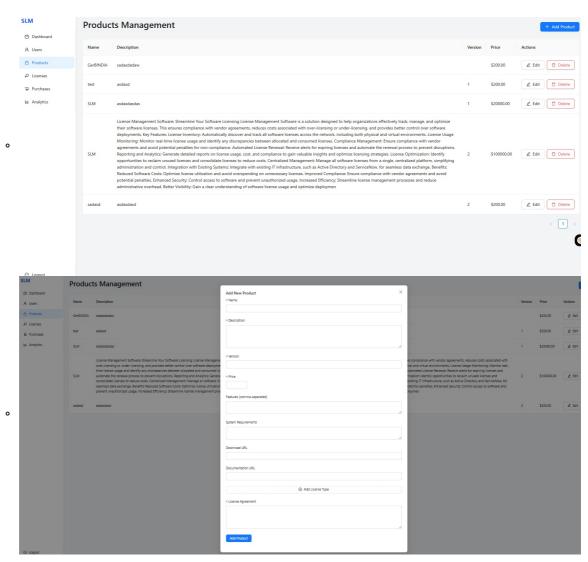

3. User Management

- View and manage all users
- Assign roles and permissions

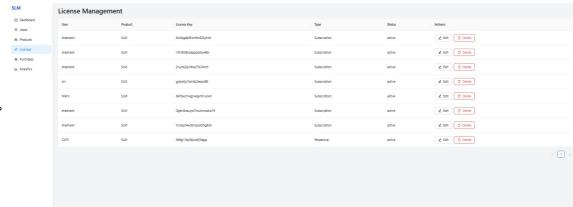

4. Product Management

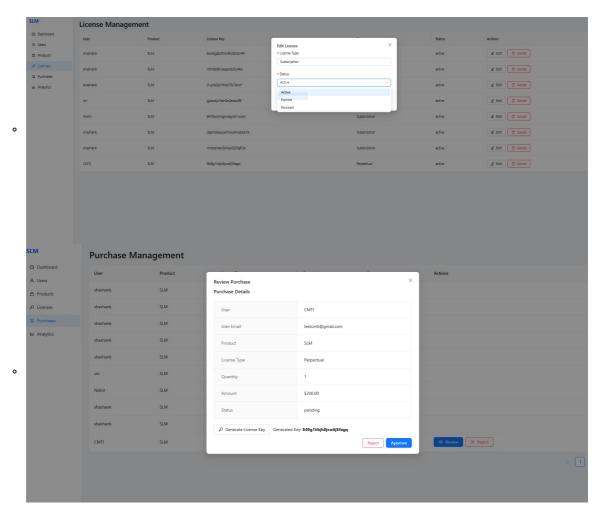

- Add/Edit/Remove products
- Configure product details and licensing options

5. License Management

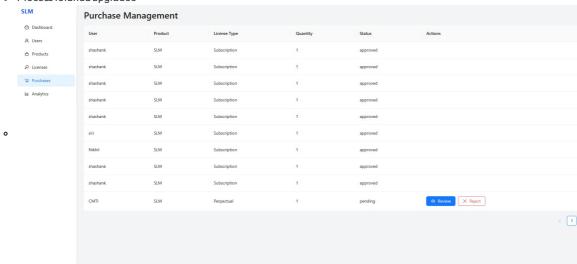

- Generate and manage license keys
- View activation status
- Revoke/reactivate licenses

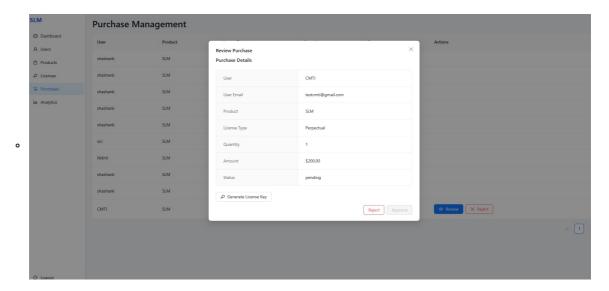

6. Purchase Management

- Track purchases and subscriptions
- Process refunds/upgrades

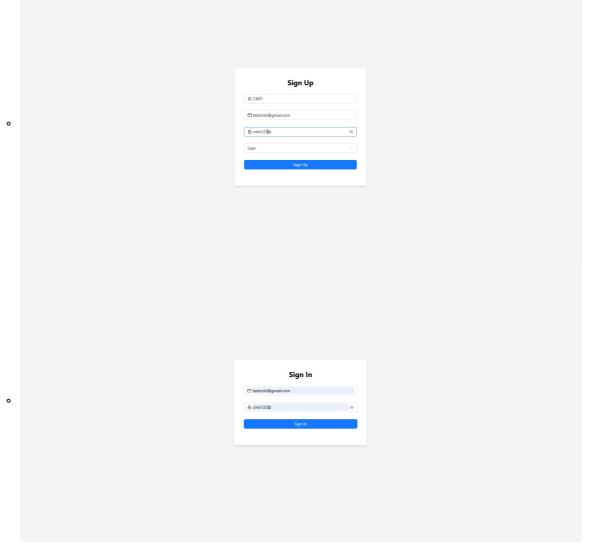

End User Workflow

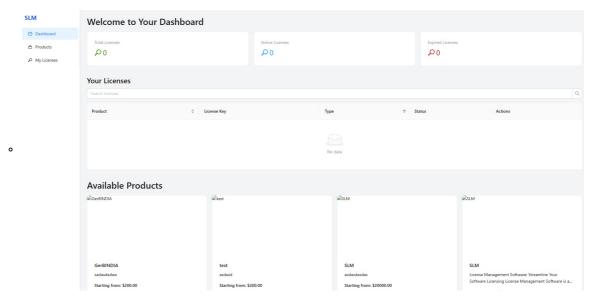

1. Registration/Login

• Create an account or log in

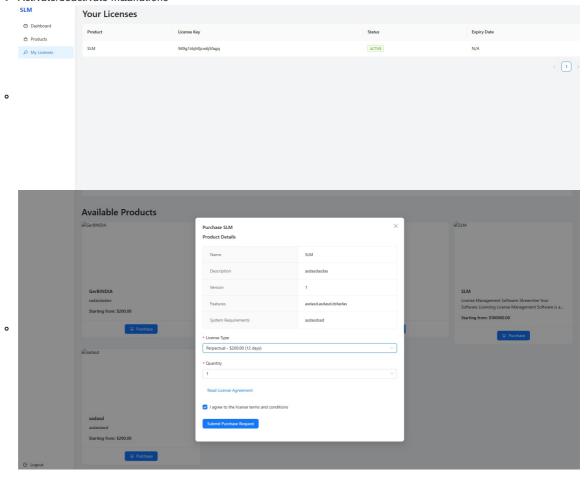

2. User Dashboard

- View purchased licenses
- Access download links

3. License Management

- View and manage licenses
- Activate/deactivate installations

4. License Activation

- Activate software using license key
- Manage activated devices

```
PS D:\Naanu\Codes\CMTI\License managment\LMS Simulation> node activation.js
💋 Starting license activation process...
Checking for existing license...
No existing license file found, attempting to activate...
Attempting to activate license: an10ypfuzg8zhki92twrm
Entering activateLicense function
Request body: {
 licenseKey: 'an10ypfuzg8zhki92twrm',
 machineId: '151366df81d31c39409b87692204905c3cdf766af53b74612ec0a7c0aba70838'
License activation response: {
 message: 'License activated successfully',
 license: {
   _id: '68412508d60b36487ad6757a',
   userId: '68411f11d60b36487ad67468',
   productId: '66e96eeb7a7149dee0d6f4fd',
   licenseKey: 'an10ypfuzg8zhki92twrm',
   type: 'perpetual',
   startDate: '2025-06-05T05:03:04.826Z',
   status: 'active',
   activations: [ [Object] ],
   createdAt: '2025-06-05T05:03:04.827Z',
   updatedAt: '2025-06-05T05:03:58.031Z',
   __v: 1
License data saved successfully
License activated successfully. Access granted to the application.
Application started successfully!
```

Integration Points

API Endpoints

Authentication: /api/auth/*
Users: /api/users/*
Products: /api/products/*
Licenses: /api/licenses/*
Purchases: /api/purchases/*

Webhooks

- License activation events
- Purchase notifications
- System alerts

Client Integration

```
const LicenseManager = require('./licenseManager');
const license = new LicenseManager(API_URL, LICENSE_FILE_PATH);

// Check license
const isValid = await license.verifyLicense();

// Activate license
await license.activateLicense(LICENSE_KEY);
```

Troubleshooting Guide

Common Issues

1. Activation Fails

- Verify internet connection
- · Check license key validity
- Ensure machine ID hasn't changed

2. Login Issues

- · Reset password if necessary
- Check account status (active/suspended)

3. License Validation Failures

- Check system date/time
- Verify license expiration
- · Check for blacklisted keys

4. API Connectivity

- Verify API endpoint URL
- Check CORS configuration
- Verify network connectivity

FAQs

General

Q: How do I reset my password?

A: Use the "Forgot Password" link on the login page.

Q: How many devices can I activate?

A: This depends on your license type. Check your license details.

Licensing

Q: What happens if I change my hardware?

A: Contact support to reset your activations if you've reached your limit.

Q: How do I upgrade my license?

A: Navigate to the upgrade section in your dashboard.

Technical

Q: How do I integrate the license check in my application?

A: Include the client library and follow the integration guide.

Q: What data is collected during activation?

A: Only machine ID and license details are collected for validation.
